BESCHRIJVING

HDMI module for Soundhub - Dolby Digital & DTS decoding

Voegt draadloos surround-geluid toe aan de DALI SOUND HUB.

Deze ARC/eARC-compatibele module codeert DOLBY en DTS surround tot 7.1 en stelt u in staat luidsprekers van de OBERON C-, CALLISTO C- en RUBICON C-series te combineren.

Wireless surround

Now you can build a complete, wireless surround system with DALI active wireless speakers. Add the HDMI expansion module to your SOUND HUB for HDMI ARC and eARC connectivity, allowing you to stream surround sound wirelessly from your TV. Both Dolby and DTS formats are supported, in configurations up to 7.1 channels.

Zero-loss

Zero Loss volume control is handled at the end of the digital signal chain - in the speakers themselves. This ensures that volume adjustment does not result in data loss through truncation of the digital word length.

Low latency

The total system latency is extremely low at under 15mS, meaning that the signal delay from input to speaker is so low, that you will experience no loss of lip-sync in audio-visual systems.
