BESCHRIJVING

- DirectSelect Premium: Direct, simple selection of the desired cooking zone, power and additional functions.
- FlexInduction Zone: Get more flexibility by combining the cooking zones into one big zone for placing small pots and large cookware.
- PerfectFry: For perfect browning of roasted foods thanks to sensor control with 5 power levels.
- ComfortProfil: Elegant, appealing design with bevelled front and metal strips on the side.
- MoveMode: the automatic setting of cooking levels allows fast boiling on the front, cooking on the middle and simmering on the rear cooking zone.

Usability on a bigger scale.

DirectSelect Premium offers premium usability during cooking with a full length of 30cm. For an intuitively simple selection of power levels and additional functionalities. Our user interface only shows the functions which you actually require. The user interface is not visible when turned off and makes for a clean and elegant design of the hob

The hob that makes space for more.

One pot or several, one behind the other or side by side - with FlexInduction from Bosch the choice is all yours. You can use your cooktop like a conventional induction cooktop, e.g. with four separate cooking zones, or, at the touch of a button, combine them to make two large, continuous cooking zones. This gives you additional space on which you can place a larger cookware item, such as a roaster. But also cooking accessories as our griddle plate.

Achieve best frying results.

Bovenstaande informatie is uitsluitend informatief/indicatief en aan wijziging onderhevig

The temperature is crucial for frying. Too high will make even the best steak fry too quickly or scorch it. No matter how you like to eat it - rare, medium or well-done: frying meat is made simple now. PerfectFry sensor regulates temperatures continuously during frying and adjusts them precisely if needed.

ComfortProfil: elegant, appealing design with bevelled front and metal strips on the side.

Cooking like a chef.

MoveMode makes cooking fully intuitive and comfortable. In the past, you had to adjust the power level if you had just boiled your soup at level 9, let it cook at level 5 and now wanted to simmer it at level 1,5. Now, MoveMode does the job for you. Activating MoveMode divides the cooking zone into three different areas with pre-set power levels. All you have to do is to move the pot from the front area of the zone, where the food is boiled, to the middle, where the food is cooked, and to the back area, where it continues to simmer.

Controlling the hob made easy.

If you move a pot from one cooking zone to another when cooking, the temperature level does not need to be individually adjusted. As the new cooking zone adopts the old settings such as cooking heat and time - all it takes is the touch of a button to confirm.

Boost your cooking

Sometimes you just need a little extra boost when cooking. The improved PowerBoost function in our induction hobs adds even more power to speed up the cooking process. For example, you can now boil 2 litres of water almost 50% faster as you would on conventional glass-ceramic hobs.

Stores your control settings.

If you turn off the cooktop it saves the last selected setting for a short time. If the cooktop is switched of within a short time again the former settings are still available.

Induction Technology

Induction hobs generate heat only where it is needed - in the base of the pan. What does this mean for you? More safety and more convenience. The lower temperature keeps both big and little hands safe from burning. Not only that, but an induction hob brings two litres of water to a boil twice as fast as a glass-ceramic hob, which also saves a great deal of energy.
