BESCHRIJVING

M.ZUIKO 150-400MM IS PRO AT A GLANCE

Announcing breakthrough technology that changes the way you shoot. The M.Zuiko 150-400mm IS PRO delivers unrivaled portability, imaging power, and all-weather performance. At only 4.1 pounds and 12.4 inches in length, you can easily hold the 35mm-equivalent 1000mm reach for unprecedented mobility. Powerful image stabilization enables sharp telephoto images, all handheld. Break free from your tripod. The ultra-zoom revolution has begun.

Powerful Focal Range

Reach far with a lens that's powerfully small. The compact 150-400mm IS PRO lens delivers a 35mm equivalent focal range of 300-800mm that gets you close without moving a step, and the built-in teleconverter can extend your reach even further. It's so powerful, you can easily capture the minute detail on a bird's wing or the whiskers on a fox.

Bright, Fixed Aperture

The 150-400mm IS PRO provides a bright F4.5 aperture across the entire zoom range up to 800mm. Using the built-in 1.25x teleconverter boosts your focal reach to 1000mm with a F5.6 aperture. The lens uses leading edge optical technologies to significantly reduce color fringing and flares and ensure edge to edge sharpness. There are 28 glass elements arranged in 18 groups, including a large diameter EDA lens and 4 Super ED lenses. Advanced Z Coating Nano minimizes ghosts and flares to deliver the exceptional image quality M.Zuiko lenses are known for around the world.

Built-In Teleconverter

Engage the 150-400mm IS PRO's built-in 1.25x teleconverter to extend the focal range to 1000mm (35mm equivalent). Plus, add optional M.Zuiko teleconverters to provide a maximum equivalent focal range of 750-2000mm. With the M.Zuiko lens system, you'll enjoy unprecedented handheld telephoto reach.

From Telephoto To Macro

Sure, it's a distance-erasing ultra-zoom lens. But it also doubles as a lens for macro shooting. Don't want to get too close to your macro subject? Enjoy a 4-foot shooting distance throughout the zoom range with a 35mm equivalent maximum image magnification of x0.57. Use the 1.25x teleconverter to raise your magnification to x0.71 for capturing spectacular detail on an insect or flower.

Focus Stacking Support

The 150-400mm IS PRO lens supports focus stacking in compatible cameras so you can create composite images with crisp focus from front to back.

SPECIFICATIES

Algemeen
